ABOUT MYSELF

Delta Excellence Student at Fontys ICT & Open Learning. My passion is to build fast, modern-looking websites that create value. I am accustomed to working in multi-disciplinary projects and working my way up to finding solutions. I am also a novice electric guitar player and a passionate at-home cook. :)

EDUCATION & TRAINING

01/09/2024 - CURRENT Eindhoven

Bachelor of Science in Information & Communication Technology Fontys University of Applied Sciences

Field(s) of study: Information and Communication Technologies | **Level in EQF:** EQF level 6

SKILLS

Agile development | computer programming | Git | debug software | Python | Docker | Linux | analyse software specifications | develop software prototype | use software design patterns | Dutch | English

FRONTEND

HTML | CSS | TypeScript | JavaScript | React | Vue.js | Node.js | create prototype of user experience solutions | web programming | webiste performance optimisation | implement front-end website design | study website behaviour patterns | use markup languages | improve user-friendliness | frontend engineering | frontend development

BACKEND

Python (computer programming) | Ruby (computer programming) | database management systems | database | SQL | PostgreSQL | design application interfaces | define software architecture

LANGUAGE SKILLS

MOTHER TONGUE(S): Russian
OTHER LANGUAGE(S):

English

Listening C2
Reading C2
Writing C1
Spoken production C1
Spoken interaction C1

Dutch

Listening B1
Reading B1
Writing B1
Spoken production B1
Spoken interaction B1

PROJECTS

01/09/2025 - Current

Portflow Annotation functionality proof-of concept (Fullstack)

Proof-of-concept of annotation functionality to prove feasibility of the feature in Portflow.

- Built the initial proof-of-concept using Ruby on Rails, ActiveRecord, and React, including custom database schema design to demonstrate

core annotation logic

- Led the end-to-end design process in Figma, conducting competitor research and usability surveys to define the final interface and user workflows
- Developed and implemented the comment box and toolbar components using TypeScript and React, resulting in a successful Pull Request to the PDFSlick upstream repository
- Currently act as a Team Leader stirring the direction of the project

Link https://pdfslick.dev/examples/comments

01/09/2025 - Current

BAEKEN Onboarding tool (Frontend)

Prototype of an onboarding tool for BAEKEN to facilitate new services the company provides. As result, the team released an Azure-deployed and scalable prototype.

- Engineered and maintained the core frontend repository with a RESTful structure and managed page routing using TypeScript, React and Material UI
- Continuously refined application workflow through stakeholder validation

10/02/2025 - 22/06/2025

SPIE RAG Chatbot to analyze internal company data

An NDA was signed for this project, so it will be described in an abstract and minimal way. The final solution was prototype of an multi-agentic chatbot, that would process natural language, execute queries against the database and output results in human-readable format.

- Implemented and orchestrated multiple agents using LlamaIndex to handle complex task execution and natural language parsing
- Optimized query accuracy through extensive prompt engineering and built automated pipelines for processing unstructured data (.pdf, .txt) into actionable insights

10/02/2025 - 12/12/2025

Mobile app - Nudger (FullStack)

Hobby-project: Mobile app designed to reduce habitual spending.

- Designed and developed the UI of the application
- Designed and built the architecture using Python (FastAPI, SQLAlchemy)
